(a) Source-role problems: what the checker detected and missed

16 pages had a source-role failure by reviewer majority.

Recall = 2/16 = 12.5%. The checker also flagged 2 pages rated Pass by reviewer majority.
Of its 4 flags, 2 were supported: **precision = 50%.**

(b) Condition flags: same output, different disclosure criteria

Same 10 eligible pages; same 5 checker flags. The checker recorded **Fail** for every page shown below.

Reviewer criterion	Reviewer labels for the five flagged pages					Flag support
	C02	C10	C01	C12	C26	
R1/R2: source visibility A visible source condition counted as disclosure.	Fail	Fail	Pass	Pass	Pass	**2/5 supported** Precision 40%
R3: reader-facing explanation The written safeguard had to state the condition and its variable.	Fail	Fail	Fail	Fail	Fail	**5/5 supported** Precision 100%

Fail: reviewer supported the checker flag. **Pass:** reviewer disputed the flag.
The 5 other eligible pages were Pass for the checker and all reviewers; recall was 100% under both criteria.
The R3 row measured agreement with the reader-facing criterion implemented by the checker.
